

ADOPTED: 9-15-2022

REVISED:

PURPOSE

Jefferson Fire District is committed to preventing accidents and ensuring the safety and health of its members. Jefferson Fire District will comply with all applicable federal and state health and safety rules and provide a safe, healthful environment for all members. This written Hazard Communication Plan is available at each station and on the district's website.

A. IDENTIFYING HAZARDOUS CHEMICALS

A list is attached to this plan that identifies all hazardous chemicals with a potential for member exposure at this workplace. The following lists at the end are separated by station. Detailed information about the physical, health, and other hazards of each chemical on the list matches and can be easily cross-referenced with the product identifier on its label and on its Safety Data Sheet.

B. IDENTIFYING CONTAINERS OF HAZARDOUS CHEMICALS

All hazardous chemical containers used at this workplace will either have the original manufacturer's label –that includes a product identifier, an appropriate signal word, hazard statement(s), pictogram(s), precautionary statement(s) and the name, address, and telephone number of the chemical manufacturer, importer, or other responsible party –OR a label with the appropriate label element just described; OR workplace labeling that includes the product identifier and words, pictures, symbols, or combination that provide at least general information regarding the hazards of the chemicals.

C. KEEPING SAFETY DATA SHEETS

Previously known as Material Safety Data Sheets (MSDS).

1. Safety Data Sheets are readily available to all members during the work shift. Members can review Safety Data Sheets for all hazardous chemicals used Jefferson Fire District. These sheets can be found at all three of the Fire Districts stations and can be found online via the Fire District's web page.
2. The Safety Data Sheets are updated and managed by The Fire Chief. If a Safety Data Sheet is not immediately available for a hazardous chemical, members can obtain the required information by contacting The Fire Chief.

D. TRAINING MEMBERS ABOUT CHEMICAL HAZARDOUS

1. Before members start or exposed to new hazardous chemicals, members must attend a hazard communication training that covers the following topics:
 - a. An overview of the requirements in Oregon OSHA's hazard communication rules
 - b. Hazardous chemicals present in the workplace.
 - c. Any operations in their work area where hazardous chemicals are used.
 - d. The location of the written hazard communication plane and where it may be reviewed.

- e. How to understand and use the information on labels and in Safety Data Sheets.
 - f. Physical and health hazards of the chemicals in their work areas.
 - g. Methods used to detect the presence or release of hazardous chemicals in the work area.
 - h. Steps that have been taken to prevent or reduce exposure to chemicals used in the work area.
 - i. How members can protect themselves from exposure to these hazardous chemicals through use of engineering controls/work practices and personal protective equipment.
 - j. An explanation of any special labeling present in the workplace.
 - k. Emergency procedures to follow if an member is exposed to these chemicals.
2. The Fire Chief is responsible to ensure that all members receive proper training. After attending the training, members will sign a form verifying that they understand the above topics and how the topics are related the Fire District's Hazard Communication Plan.

E. INFORMING MEMBERS WHO DO SPECIAL TASKS

Before members perform special (non-routine) tasks that may expose them to hazardous chemicals, the supervisor will inform them about the chemical's hazards. Supervisors will inform members about how to control exposure and what to do in an emergency. The employer will evaluate the hazards of these tasks and provide appropriate controls including personal protective equipment and all additional training as required.

F. INFORMING MEMBERS ABOUT HAZARDOUS CHEMICAL IN PIPES

This workplace follows the labeling requirements in OAR 437-002-0378 concerning the labeling of pipes. Before working in areas where hazardous chemicals are transferred through unlabeled pipes or where pipes are insulated with asbestos-containing material, members will contact The Fire Chief for the following information:

1. The chemicals in the pipes.
2. The physical or health hazards of the chemical present.
3. The safe work practices necessary to prevent exposure.

G. INFORMING CONTRACTORS AND OTHER EMPLOYEES ABOUT HAZARDOUS CHEMICALS IN THE WORKPLACE

1. If members of other employer(s) may be exposed to hazardous chemicals at our workplace (for example, members of a construction contractor working on-site) it's the responsibility of The Fire Chief to provide contractors and their members with the following information:
 - a. The identity of the chemicals, how to review the Fire District's Safety Data Sheets, and an explanation of the container and pipe labeling system.
 - b. Safe work practices to prevent exposures.

-
2. The Fire Chief will also obtain a Safety Data Sheet for any hazardous chemical a contractor brings into the workplace.
